**Kardia Health Systems to Introduce
Web-Based Reporting and Imaging Solution for Vascular Practices**
Debuting at ACC Conference on March 28, 2009

MINNEAPOLIS, (March 27, 2009) – [Kardia Health Systems](#), a company incorporated to commercialize the Mayo Clinic invented Echocardiography Information Management System, will launch its latest intelligent reporting system for vascular labs this weekend at the American College of Cardiology's 58th Annual Scientific Session in Orlando. [KARDIA V](#), the fully integrated reporting and image viewing solution, helps vascular clinics streamline workflow, while improving operational efficiencies.

The SaaS model, or 'software as a service', uses a Web-based platform, allowing practitioners convenient and remote management capabilities of patient images and records- anytime, anywhere. This EMR compatible interface features robust reporting and a fully editable graphics program, designed for the most frequently performed vascular procedures. KARDIA V auto-populates measurements to help reduce errors. This process speeds along diagnostics, eliminating dictation and transcription services, and helps clinics focus more on the treatment of patients.

KARDIA V is HIPAA compliant, and has Intersocietal Commission for the Accreditation of Vascular Laboratories (ICAVL) compliant structured reports and ICAVL report generation for Accreditation submission.

"Our vendor neutral systems are very intuitive and easy to use," said George Danko, president of Kardia Health Systems. "KARDIA V is responsive to the marketplace, by addressing the need for remote Web access and patient data transfers. Physicians and patients are no longer tethered to the team or lab where diagnostics was done. We offer 24/7 customer service and remotely supported upgrades for free. Our system not only reduces costs but improves patient care."

Kardia Health Systems offers flexible payment options to fit the size and scope of any hospital or clinic. No start-up capital is needed for hardware or equipment, and costs are based on a pay-per-use system. If there is a computer & internet connection, Kardia can get a practice started.

Ellen Johnson, director of client services for Kardia Health Systems, will be in attendance at the ACC conference, and available for interviews and demos of KARDIA V. She can also share more on Kardia's entire suite of software solutions for multi-modality practices.

About Kardia Health Systems, Inc.

Kardia Health Systems is an information technology firm dedicated to assisting high performance healthcare professionals in delivering the highest quality health care worldwide. Kardia Health Systems is the sole licensee of the Mayo Clinic-created Echocardiography Information Management System. Mayo Foundation for Medical Education and Research owns equity in Kardia and receives royalties on products sold or licensed by Kardia. For more information, visit www.KardiaHealth.com.
